### Career Objective:

To work with a dynamic environment that will provide me with the opportunity for continuous learning and to grow professionally while utilizing my skills.

### Education Qualifications:

M.C.A.	SRM University	2023-25	Pursuing
B.C.A.	CCS University	2020-23	1 <sup>st</sup> Division
Senior Secondary	CBSE	2019-20	1 <sup>st</sup> Division
High School	CBSE	2017-18	1 <sup>st</sup> Division

### Technical Skills:

**Languages:** Golang, PHP, C, SQL

**Frameworks:** Laravel

**Tools:** Postman, Docker, GitHub, xampp server

**Other Skills:** RESTful API

**Knowledgeable in:** Computer Networks, Operating System, Internet of Things

### Experience:

Successfully completed a 3 months internship from a New Delhi based startup.

#### Internship – Web Developer

**Duration:** Nov'21 – Jan'22

Worked on two live client projects implementing secure login system and dynamic content rendering using core-PHP, MySQL database.

### Academic Projects:

#### 1. Bed-n-Breakfast Reservation System

**Technology/Tools Used:** Golang, MySQL, MailHog, GitHub

**Description:** This project is based on an online reservation system for a bed and breakfast company named “Royal BnB”. The application has secured session management and CSRF protection middleware which provides a decent level of security. Application admin can access all the data regarding reservations, guests. Admin has to log in and can go through the reservations, can update and delete them. The guest can search availability for the given room options, and can easily reserve the room & the reservation confirmation for the same is also sent to the guest via mail. Project developed individually.

#### 2. Digital Notes application

**Technology/Tools Used:** Golang, MySQL, MailHog, GitHub

**Description:** This project is based on a digital notes web application named “Scribble”. After registration for the account, users will receive a welcome mail, user can log in into it's account and can also delete it permanently. The application admin can access all the necessary application data like number of registered users, can update and delete their account. The application has secured session management and CSRF protection middleware which provides a decent level of security. Application will cover basic CRUD operations. Project developed in a team.

### **3. RESTful API Development with Laravel and PHP**

**Technology/Tools Used:** Laravel, Postman, RESTful API, PHP, MySQL, GitHub

**Description:** Completed a detailed course on building RESTful APIs using the Laravel framework. Learned to create and structure APIs with features such as routing, controllers, and middleware. Gained practical experience in handling database operations with Eloquent, managing API requests and responses, and implementing validation and error handling. The course emphasized best practices for designing scalable, maintainable APIs and covered essential concepts like API versioning and securing endpoints. Project developed individually.
